MADE IN INDIA

Purpose :- "To provide innovative solution for the growth of nation"

Svi®

Extra Strong Gas Saver

CERTIFICATES

"Saving gas means saving money - saving money means earning money"

About the Technology

Save upto 31%* gas...

The cooking gas is passed directly through powerful magnets, placed inside the device. This increases the excitation level of gas molecules, causing their clustering. When the gas now comes out of SVI, it burns with improved thermal efficiency. This unique process results in saving gas by upto 31%*. Uptill now the magnets were used to be placed outside the tube carrying gas, which gave low saving efficiency of the gas saver. The innovative feature of SVI is that the gas comes in physical contact with the power packed imported rare earth magnets.

Observations after Installation of Product

- The resulting flame becomes brighter and turns from reddish to bluish white Orange
- High Temperature more uniform flame observed
- Flame length becomes more uniform in vertical length across the burner
- Flame length is reduced vertically and extended laterally as rate of combustion becomes higher
- Less amount of radiant heat on the sides of the burner
- Concentrated heat in the vertical direction
- Reduction in ambient temperature of the surroundings due to reduction in Carbon Monoxide Emissions

Product benefits

- **Saves up to 31% of LPG / CNG / Diesel / Petrol & Natural Gas** -Improve thermal efficiency of the fuel. Thus more heat is generated in less fuel. Thus save money.
- **Saves Time** - As this device increases the power of the fuel, thus work completes comparatively faster.
- **Saves Energy & Fuel** - If the desired work finishes fast, thus the burner/Furnace is used for less time on same pressure knob position.
- **Saves Money** - As fuel is one of the major expenditure in our daily life/manufacturing, thus saving fuel will result in cost saving on monthly & yearly basis, thus our energy banks, cylinders, fuel tanks will last longer.
- **Environment Friendly** - As the fuel burns completely, there is significant reduction in ambient temperature and pollutant gases. This help to build healthier working conditions.

Main Features

- NSIC Certified & Patented product from Government of India
- European standard "CE" safety compliant product which is manufactured by an ISO 9001:2008 certified company.
- Palestinian Government Certified for Safety Compliance,
- Taiwan Gas Lab. and ITALABS (ONGC Lab.) certified the products for its fuel saving,
- SS / IS-319 engineering grade, Extra Strong heavy brass metallic design (life period of 8-10 years).
- Non exhausive, A/on Corrosive, extra powerful permanent magnetic circuitry.
- No external electrical or chemical power source required,
- Heat & water resistant,
- Maintenance free device with quick & easy Installation procedure,
- Saves up to 31% of LPG/CNG/Diesel/Petrol & Natural fuel Consumption,
- Approx. 50% reduction in un-burnt hydrocarbons & harmful Carbon Monoxide emissions.
- Can be fitted with any of existing furnaces, burners, Electricity Generators, Boilers, machines and Automobiles.
- Environment Friendly product with least payback period,
- 2 Year Warranty*
